Terms of Service

Comment Lens | Version 0.1 | Last updated: 14 October 2026

Current status: Comment Lens is a development preview using handwritten sample comments. Live YouTube analysis, account sign-in, and cloud result storage are planned features. These terms describe the preview and the intended live service separately.

1. Who provides Comment Lens

Comment Lens is an independent personal project developed and maintained by Siddhartha Ganguli. These terms describe the conditions for using its extension and dashboard. By using Comment Lens, you agree to these terms. If you do not agree, stop using the application.

You must be able to enter into these terms under the rules that apply to you. Where parental or guardian permission is required, obtain it before using the service.

2. YouTube terms and privacy

By using Comment Lens, you also agree to be bound by the YouTube Terms of Service. The planned live service uses YouTube API Services to retrieve public video information and a limited sample of public comments. Comment Lens is developed independently; its sentiment estimates are generated by its own model.

Read the Comment Lens Privacy Policy for information about data use, providers, retention, and deletion requests. Google's practices are described in the Google Privacy Policy. Agreement to the app's privacy policy will be requested before live API features are enabled.

3. What the preview and planned service provide

The current preview lets you explore sample charts and comments, apply filters, and export matching sample rows as CSV. Entering a real video link still displays demo data. It does not fetch that video's comments or create a live sentiment analysis.

The planned live version will analyze up to 1,000 latest public top-level comments for a selected public video. This sample excludes replies and may not represent the entire audience. Results can be cached, partial, empty, or unavailable. The current preview has no billing or purchase features; any paid feature would need clear pricing and terms before you choose it.

4. How to interpret sentiment results

A sentiment label is an estimate about a comment's text. Sarcasm, mixed opinions, unfamiliar languages, and unknown vocabulary can produce mistakes or skipped comments. Read the original context before relying on a label. Model confidence is a class score, not a guarantee that a prediction is correct. Evaluation results from a training dataset do not establish accuracy for your selected video.

5. Responsible use

Use Comment Lens to understand feedback while respecting other people, their privacy, and the rules governing their content. You agree to:

- Use information lawfully and respect the rights of creators and commenters.
- Avoid harassment, exposing private information, or using sentiment labels to profile people or make consequential decisions about them.
- Respect usage limits and ownership checks; do not bypass controls, probe other users' accounts, or interfere with the service.
- Keep account credentials and result-download links private. Report suspected misuse through the contact below.

6. Content rights and exports

Creators and commenters retain their rights in the original material. Viewing or exporting information through Comment Lens does not transfer ownership or grant an unrestricted right to republish it. Follow YouTube's terms and applicable rights when using an export.

CSV files are saved on your device. You control their storage, sharing, and deletion. Licenses supplied with the project's source code or third-party components govern use of that software.

7. Limits, availability, and access

The planned live service will apply request, concurrency, and API-quota limits. Some requests may wait, fail, or stop with a partial result. Features may be paused for maintenance, quota exhaustion, policy changes, or security issues. No particular processing time, uptime, or user capacity is promised.

Access may be restricted where necessary to address misuse or protect users and the service. You can contact the developer to ask about a restriction.

8. Expiration and deletion

Planned analysis access lasts up to 24 hours from the original analysis creation. Cached results keep their original expiry and may expire sooner. Physical cleanup is handled separately, as described in the Privacy Policy. Removing an owned history entry ends new access through that entry; shared public results may remain until expiry, and an existing download link may work for up to five minutes.

To request deletion of stored information, cached source data, or an account, email siddharthaganguli0093@gmail.com. Deletion from Comment Lens does not remove content from YouTube or copies already downloaded by users.

9. Service limitations and your rights

The development preview is provided as available. The developer does not guarantee complete samples, correct sentiment labels, continuous availability, or compatibility with every device. To the extent permitted by applicable law, use and decisions based on results are your responsibility.

These terms do not remove mandatory consumer rights or exclude responsibility that applicable law does not allow to be excluded.

10. Changes and contact

Material changes will be explained alongside an updated revision date before they apply. Where a change requires fresh agreement, it will be requested before access to the affected feature. You may stop using the app or remove the extension at any time; deletion requests follow the Privacy Policy.
